PIT BIKE OFF ROAD : MTR XM 190 WHEELS 19-16

MTR XM 190 WHEELS 19-16

The MTR XM190 represents the top level of the XM range, equipped with the powerful and well-known ZS190 190cc engine, a true benchmark in the pit bike and off-road world for its performance, reliability, and strong power delivery. This version combines a spectacular design with components built for demanding use on tracks, trails, and enduro riding.

Its robust Extreme Box chassis has been developed to withstand jumps, rough terrain, and intensive motocross-style riding, offering excellent stability and durability. Thanks to its mid-size configuration and 88 cm seat height, the MTR XM190 provides a comfortable yet aggressive riding position, very similar to a full-size motocross bike.

The 19” front and 16” rear wheel setup significantly improves stability, obstacle handling, and performance on technical terrain, making this pit bike perfect for both experienced riders and those looking for a powerful and fun off-road machine.

At its core, the XM190 is powered by the ZS190 4-stroke engine with a 4-speed manual gearbox, cooled by a large oil radiator to ensure optimal performance even under demanding conditions. Its strong power delivery provides explosive acceleration, immediate throttle response, and a very sporty riding experience, while still maintaining good fuel efficiency and reliability.

In terms of aesthetics, the MTR XM190 features KTM Factory-style plastics with aggressive, modern, and fully racing-inspired lines. Its design stands out for its professional and sporty look, making this pit bike impossible to ignore both on and off the track. It also includes a transparent fuel tank, allowing easy fuel level monitoring and adding extra visual appeal.

The suspension setup includes 735 mm inverted front forks and a rear shock absorber adjustable in compression, delivering excellent performance on jumps, rough sections, and extreme off-road riding.

As with the entire MTR range, the XM190 comes with a 36-month official warranty, ensuring quality, confidence, and long-term support for every ride.
