CLAMPS : Clamps cnc red adjust

Clamps cnc red adjust

MTR continues to focus on quality and innovation. We do not stand still and continue to innovate for all our customers. On this occasion, as a result of our efforts to improve and obtain the best results on the track, we have designed variable speed axles for pit bikes.

These spikes are the hours work of our engineers to get the best development. Light weight counters since they are made of high quality 6061 aluminum with anodized hardened in red color.

The tips are the best element to go fast in each circuit as it depends on the inclination of the forks taking faster curves or others depending on the circuit. With these pins you will not only be able to advance or delay your handlebars to the correct position of your piloting, but in case you are little you can modify the direction angle of your pit bike as best you can. If you go to a ratonero circuit where you are closed the direction or to a contrary to a fast circuit where you are open too, you will not have these problems, adjust it to your measurement and leave it perfect for your piloting!

The high quality tiles are beautiful! A nice and elegant design and the best price that nobody can offer you.

Badges made by MTR for their MTR products and pit bikes. They can be adaptable to any other pit depending on your chassis model.
