EEC MTR : Electric skateboard HARLEY new model

Electric skateboard HARLEY new model

MTR presents its new EGREEN electric scooter, a Harley-style scooter with a compact and attractive design. It is a scooter for travelling in an alternative, comfortable, fast and ecological way around the city without having to waste time in traffic or looking for parking.

It has the perfect balance between the most advanced technology and innovative design, it is comfortable and silent. With a double seat for two people comfortably and a backrest. It has rear flashing lights, a switch, low beam lights and much more.

Its advantages include the discretion of a 1500w at 350rpm motor anchored to the rear wheel of the scooter, and a compact removable 20ah lithium battery at the rear with a range of up to 30km, which reduces charging time (between 4-6 hours). As an option, you can purchase a 20ah lithium battery and thus increase its autonomy considerably up to 60km (autonomy calculated on a test bench with controlled weight and gradients. This autonomy may be affected depending on the terrain conditions, weight of the pilot, state of charge of the battery...so the manufacturer is not responsible for the variation of these values) and an average consumption of 31wh/km. Now with front fork and rear gas shock absorber.

It remains stable thanks to the width of its tires. This Harley Scooter type electric scooter reaches a speed of up to 45 km/h and has a 3-speed selectable button and cable brake discs.

Electric scooter with lights, digital display with different functions, box for a second battery under the feet, steel frame, “vintage style” front fork. Scooter with front and rear hydraulic brakes.
