LEVERS : Inverted gear lever kit Red

Inverted gear lever kit Red

The manufacturer XFRONT brings us a beauty for all our pit bikes.

Following the same line of development of the raised and retarded stirrups, they have evolved to this fantastic set of levers with inverted gear.

This Red inverted shifter kit is adaptable to all pit bikes and engines without footpeg fixing. With a simple assembly you will be able to transform your pit bike into a racing motorcycle with reversed gear quickly and easily !!

It has multiple regulations such as the height of the stirrups, regulation of the shift rails, regulation of the height of the brake pedal and incredible finishes !!

For zs190 engines you must remove the original ignition cover.
