TOOLS : Tire pressure monitor system

Tire pressure monitor system

We present you a fabulous novelty.

In this moment, it could not be missing that once we were leaders in announcing this fantastic digital tool.

The MTR digital pressure gauge !!

This digital meter has an LED screen where it will monitor the pressure of each tire (front and rear) every 3 seconds and will also give us very precise values ??on the tire temperature at all times. In addition, we can record an alarm so that in the event of reaching this pressure it will alert us immediately.

It works with Wi-Fi technology with anti-interference with other devices, very stable, without data loss and with a low disconnection latency. No need batteries !! It has an internal lithium battery which we charge thanks to the magnetic charging cable that it incorporates, if magnetic !! You do not need to connect via USB or anything like that, bring it closer and it will automatically be attracted to the charging port and it will start charging.

Easy to install, we leave you a brief manual for its assembly.
