BRAKE PADS : Rear brake pads GALFER sinter

Rear brake pads GALFER sinter

Galfer rear brake pads model G1396 FD095G1396

This compound, developed and manufactured in collaboration with the world's Cross and Enduro teams and riders, is the result of constant improvement in the search for perfect braking on all types of terrain.

These Galfer metallic brake pads are specifically designed for Off-Road and minimotard motorcycles, and are characterized by their high braking power in any type of driving (wet or dry) and temperature, and in addition to a longer duration, than the compound organic.

They are designed for Off-Road/Enduro/Minimotard motorcycles, and at the same time they do not suffer from the FADING effect (loss of braking efficiency due to overheating of the discs, due to continuous use of the brakes).

This model stands out for its effective, adjustable and progressive braking, in all weather conditions.

Advantages of G1396 Sintered Composite

- high durability
- Good feel and braking feel and brake control.
- High performance in low and high temperatures, and offer better friction in wet versus dry conditions.
- Fading: high resistance to the Fade effect
