ELECTRIC BICYCLES PARTS : Electric bicycle rear wheel hub

Electric bicycle rear wheel hub

Metal hub for electric bicycle rear wheel. Mechanical component designed to provide strength, stability, and precision within the wheel assembly. Its circular design features evenly distributed mounting holes, allowing for a secure and reliable installation, ideal for withstanding the demands of electric bicycles.

The internal fitting grooves ensure proper positioning and alignment with other rear wheel system components, contributing to safe and efficient operation. The brass material offers an excellent balance of durability, wear resistance, and corrosion protection, even under prolonged use.

Suitable both as a replacement part and for maintenance or repair of electric bicycles, compatible with setups requiring a metal adjustment or fixing ring on the rear wheel.
